Memo to File:

Re: Kennecott Copper Corporation  
Bingham Canyon Mine  
ACT/035/002

A reclamation inspection of this mine was made on May 30, 1979 by Mary Ann Wright of the Division with Ms. Pam Grubaugh of Kennecott Copper Corporation.

The following areas of revegetation endeavors were observed:

1. The Copper Notch test plots;
2. The Midas plots, both the limed and unlimed areas;
3. Douglas fir plantings west of the office on the main line;
4. The evaporation ponds which were treated with lime and planted with crested wheatgrass, yellow sweet clover and alfalfa;
5. The greenhouse;
6. The tailings pond outslopes recently planted with Russian olive, fourwing saltbush and poplar, and,
7. The landscaping around the entrance to the smelter where grasses, fourwing saltbush and legumes were planted.

This inspection confirmed that ongoing reclamation is being carried out in accord with the contract with the Division and Kennecott Copper Corporation's annual report.
